Acid Resistance of AURUM®

1. Nitric Acid (19%)

Dumbbell specimens of AURUM® PL450 were immersed in 19% nitric acid, and changes in their appearance and mechanical properties were determined.

1-1. Testing Conditions

Test sample: PL450 (neat resin), small dumbbell specimens
Nitric acid concentration: 19%
Immersion temperature: 60°C
Immersion time: 168 and 720 hrs

1-2. Test Results

(1) Appearance: 
- After 168 hrs: No change
- After 720 hrs: No gloss

(2) Percent retention of physical properties:
Refer to the Table below. (Note: Percent retention with the value before immersion taken as 100%)

<table>

2. Phosphoric Acid (98%)

Dumbbell specimens of AURUM® PL450 were immersed in 98% phosphoric acid, and changes in their appearance and mechanical properties were determined.

2-1. Testing Conditions

- **Test sample:** PL450 (neat resin), small dumbbell specimens
- **Phosphoric acid concentration:** 98%  
- **Immersion temperature:** 214ºC
- **Immersion time:** 200 hrs

2-2. Test Results

(1) **Appearance:** Lost gloss and whitened surface

(2) **Percent retention of physical properties:**
Refer to the Table below. (Note: Percent retention with the value before immersion taken as 100%)
